

HELP YOU TO SAFE GUARD YOUR CAR FROM ANY KIND OF CONTAMINATION

## Do You Know Your CAR is a **BACTERIAL** breeding ground ?

It contains roughly around **285** types of **Bacteria**/sq. inch

### Benefits / features:

- ★ Unique EPA Registered Formula
- ★ Safe for environment
- ★ Non-leaching & non-poisonous anti-microbial surface protectant
- ★ Non-toxic & non-hazardous
- ★ Safe for all equipments
- ★ Reduces the spread of germs
- ★ **Effective for 90 days, yet advisable to re-apply after 15 days**

1

Bacteria can grow in food spills and suspects the dashboard was the most germ-laden location, because it's one of the warmest places in the car and has ventilation systems on either side that can aerate spores.

2

The cars are the moldiest of all forms of transportation, probably because their interiors get cleaned less frequently. If you're sensitive to mold, your car might trigger an allergic reaction.

3

Whether a car is teeming with germs also depends on where you live. Climates that are warmer and more humid produce more bacteria, because the car's interior acts like a sauna, while cold and damp conditions mimic refrigeration inside an automobile and encourage the growth of mold.

### A little Caution\*:

When you use DP Shield™ on the surface of your dash board panel where electronic systems are placed, please apply a fine mist, or a minimal amount and only when the equipment is switched off and do make sure, it's completely dry before switching it on.

\*disclaimer: if you apply too much, or soak the equipment in DP Shield™, then we are not liable for any damages.

Introducing:  
**1st** ever Car anti-bacterial protective coating
